Installation

EN

Where to install the tumble dryer

- Install the dryer far from gas ranges, stoves, radiators or hobs, as flames may damage it. If the dryer is installed below a worktop, ensure there are 10 mm between the upper panel of the dryer and any objects above it, and 15 mm between the sides of the machine and the walls or furniture units adjacent to it. This ensures adequate air circulation. Make sure the air inlets on the rear panel are not blocked or obstructed.
- You should also make sure that the room in which the tumble dryer is installed is not damp, and that it is adequately ventilated.

Ventilation

This appliance gently dries laundry by taking in cold, clean and relatively dry air, heating it and passing it through the fabric. To facilitate the drying process, damp air is expelled at the rear, through a ventilation hose. It is important that the room in which the tumble dryer is used is adequately ventilated, in order to avoid the recirculation of waste gases expelled by other appliances.

Mobile ventilation system

When using the tumble dryer with the mobile ventilation system, a ventilation hose must be connected. The hose should be securely fastened to the ventilation hole at the rear of the appliance (see "Description of the tumble dryer"). We recommend the hose is connected to an outlet near the tumble dryer, if possible. If it cannot be installed in a permanent spot, the tumble dryer will still function perfectly well if the ventilation hose is passed through a partially-opened window.

! Make sure you do not point the ventilation hose towards the air inlet, which is located on the rear of the appliance.

! The ventilation hose should not exceed a maximum length of 2.4 metres; it should also be shaken frequently to remove any fluff, dust or water deposits inside it. Make sure you do not crush the hose.

Fixed ventilation system

We recommend the ventilation hose is connected to a ventilation system for windows or doors, available from the retailer which originally sold you the appliance or from your local spare parts stockist.

Wall ventilation hole

1. Leave an opening in the wall to the left of the tumble dryer installation site.
2. Make the hose as short and straight as possible, in order to prevent any dampness from condensing and leaking back into the appliance.
3. The hole in the wall must also be straight and pointing

downwards, so that the flow of air coming out is not impeded.

Areas **A** and **B** should be checked frequently, to prevent the accumulation of fluff or debris, particularly if the tumble dryer is used very often. The hose adaptor must be fitted correctly, in order to prevent damp air from coming back into the room.

Window ventilation hole

1. Theoretically, when the tumble dryer is operating with a full load, the ventilation hole should be directly behind the fan.

2. It is therefore important that the hose is as short as possible.

! Make sure you do not push the tumble dryer too far

backwards, as this could lead to the ventilation hose being crushed, bent or even disconnected.

! There should be no cuts, bottlenecks or "U"-shaped bends in the hose, as these could impede ventilation or trap condensation.

Ventilation through an open window

The end of the hose must be facing downwards, in order to prevent the hot, damp air from forming condensation in the room or the tumble dryer.

! Make sure that the tumble dryer is adequately ventilated, and that the end of the ventilation hose is not pointing towards the air inlet pipe on the rear of the appliance.

! The ventilation hose must always be fitted to ensure correct tumble dryer operation.

! Make sure that the ventilation hose and the air inlet pipes are not obstructed or blocked.

! Do not let the tumble dryer recirculate foul air.

! Improper use of the tumble dryer may result in fire hazards.

! The air emitted by the tumble dryer should not be expelled in the same duct as used for the fumes produced by different appliances which burn gas or other fuels.

Electrical connections

Before plugging the appliance into the socket, check the following:

- Make sure your hands are dry.
- The socket must have an earth connection.
- The socket must be able to withstand the machine's maximum power output as indicated on the data plate (see *Description of the tumble dryer*).
- The power supply voltage must fall within the values indicated on the data plate (see *Description of the tumble dryer*).
- The socket must be compatible with the dryer's plug.

Should this not be the case, replace the plug or the socket.

! Do not use extension cords.

! The dryer must not be installed outdoors, even if the space is sheltered. It can be very dangerous if exposed to rain or storms.

! Once installed, the dryer's electrical wire and plug must be within reach.

! The power cord must not be bent or squashed.

! The power cord is supplied fitted with a BS1363 plug and with a 13 amp BS1362 fuse. If it is necessary to fit a replacement fuse, it must be a 13 Amp ASTA approved to BS1362 type. **WARNING:** The plug must not be used without a fuse cover. If a replacement fuse holder/cover is required, it must be of the same colour coding or wording as shown on the base of the plug.

Replacements are available from authorised dealers.

Changing the plug

The wires in the power cord are coloured in accordance with the following.

Green and Yellow (Earth) wire to terminal marked "E", symbol x, or coloured green and yellow.

Blue (Neutral) wire to terminal marked "N" or coloured black.

13A ASTA approved fuse to BS 1362.

Brown (live) wire to terminal marked "L" or coloured red.

! If the plug being replaced is a non-rewirable type, then the cut-off plug must be disposed of safely. **DO NOT** leave it where it can be inserted into a socket and create a shock hazard.

! The power cord should be checked periodically and replaced by a cord specially prepared for this dryer and fitted only by authorized technicians (see *Service*). New or longer power cords are supplied at an extra charge by authorized dealers.

! The manufacturer denies any responsibility should any of these rules not be followed.

! **If in doubt about any of the above consult a qualified electrician.**

Levelling the tumble dryer

The tumble dryer should be installed level in order to operate correctly.

After installing the tumble dryer in its permanent position, make sure it is level; check its side-to-side levelling first, followed by front-to-back.

If the tumble dryer is not perfectly level, use a wooden block to support it while you adjust the two front feet, making them taller or shorter as necessary.

Preliminary information

Once the tumble dryer is installed, clean the inside of the drum before operating it and remove any dirt accumulated during transportation.

Description of the tumble dryer

Front side

Rear side

EN

Control panel

Drying time selector knob

This is used to set the drying time: turn the knob in a clockwise direction until the indicator is set to the desired drying time (see *Drying settings*).

High Heat button

It can be used to customise the selected programme in accordance with your own requirements.

START button

Press the button to begin drying.

How to carry out a drying cycle

Starting a drying programme

1. Plug the dryer into the power supply socket.
2. Select a suitable drying programme for the type of laundry (see *Laundry*).
3. Open the door, ensure that the filter is clean and securely placed.
4. Load the machine, making sure that no piece of laundry gets between the door and the relative seal. Close the door.
5. Turn the TIMER knob until the indicator is pointing towards the most suitable drying time for the type of fabric in that load. Use the table to check the relationship between fabric type and load capacity (see *Drying settings*), and make sure you are familiar with the instructions provided for each type of fabric (see *Laundry*).
6. If necessary, set the temperature using the HIGH HEAT button.
7. Press the START button to start the drying cycle.
Laundry can be checked while the drying programme runs and any garments already dry can be removed, while drying continues for the remaining items. After closing the door, press the START button to resume machine operation.
8. The final COLD DRYING phase (i.e. the fabrics are cooled) activates during the last few minutes of the drying programme; always allow this phase to terminate.
9. Open the door, remove the laundry then clean the filter and replace it.
10. Disconnect the dryer from the power supply.

Drying settings

EN

Drying times

The drying time depends on the size of the load and on the type of fabric it contains (see *Table*).

The cold drying cycle runs during the final 10 minutes of the programme.

! For large loads, select the High Heat option if available.

Fabric	Load					
	1 kg	2 kg	3 kg	4 kg	5 kg	6 kg
Cotton – high heat	20 - 30 minutes	35 - 45 minutes	45 - 60 minutes	60 - 70 minutes	70 - 80 minutes	80 - 100 minutes
Cotton – low heat	20 - 30 minutes	35 - 45 minutes	45 - 60 minutes	-	-	-
Synthetics – low heat	20 - 30 minutes	35 - 45 minutes	45 - 60 minutes	-	-	-

Drying programmes and options

Refresh

A short programme suitable for refreshing fibres and garments through the emission of cool air. It lasts about **20** minutes.

! As this is not a drying programme, it is not to be used for garments that are still wet.

High Heat button

If you have selected a timed drying programme, press this button to select a high temperature. The timed programmes are pre-set to low heat.

Sorting laundry

- Check the symbols on the care labels of the various garments to verify whether the garments can be safely tumble dried.
- Sort laundry according to the type of fabric.
- Empty all pockets and check for loose buttons.
- Close zips and hooks and fasten belts and strings without tightening them.
- Wring out garments to remove the maximum amount of water possible.

! Do not load the dryer when garments are dripping wet.

Maximum load sizes

Do not overload the drum.

The following values indicate the weight of dry garments:

Natural fibres: maximum **6 kg**

Synthetic fibres: maximum **3 kg**

! Do not overload the dryer as this may result in reduced drying performance.

Typical weights

Note: 1 kg = 1000 g

Garments		
Blouse	Cotton	150 g
	Other	100 g
Dress	Cotton	500 g
	Other	350 g
Jeans		700 g
10 Nappie		1,000 g
Shirt	Cotton	300 g
	Other	200 g
T-shirt		125 g

Household linen		
Duvet cover (double bed)	Cotton	1,500 g
	Other	1,000 g
Large tablecloth		700 g
Small tablecloth		250 g
Tea cloth		100 g
Bath towel		700 g
Hand towel		350 g
Double bed sheet		500 g
		350 g
Single bed sheet		

When mixing synthetic fibres with cotton garments, the latter may still be damp at the end of the drying cycle. If this happens, simply put them through a short drying cycle.
 Note: when setting the duration of the drying cycle, remember that the cold drying phase runs during the last 10 minutes, during which the dryer does not dry the garments.

Care labels

Always check the care labels, especially when placing garments in the tumble dryer for the first time. Below are the most commonly used symbols:

-  May be tumble dried.
-  Do not tumble dry.
-  Tumble dry – high heat.
-  Tumble dry – low heat.

Items not suitable for tumble drying:

- Items containing rubber parts or similar materials, or plastic film covering (pillows, cushions or PVC sports jackets), any type of inflammable object or objects containing inflammable substances (used towels containing hairspray).
- Glass fibres (certain types of draperies).
- Items which have been previously dry cleaned.
- Items marked with the ITLC symbol (“Special garments”) , which may be washed using special household products. Follow instructions carefully.
- Large bulky items (duvets, sleeping bags, pillows, cushions, large bedcovers, etc.) that expand when dried and hamper air circulation inside the tumble dryer.

Special items

Blankets and bedcovers: acrylic items (Acilian, Courtelle, Orion, Dralon) must be dried with great care at low heat. Avoid drying for long periods.

Creased or pleated garments: read the drying instructions supplied by the manufacturer.

Starched garments: do not dry together with non-starched items. Remove the maximum amount of starch solution possible before placing these items in the dryer. Do not over-dry: starch turns powdery leaving garments limp – this defeats its purpose.

Drying times

Drying times are approximate and may vary depending on the following:

- Amount of water retained by items after the spin cycle: towels and delicate items retain a lot of water.
- Fabrics: items of the same fabric, but with different texture and thickness may have different drying times.
- Amount of laundry: single items and small loads will take a short time to dry.
- Drying: if items are to be ironed, they can be removed from the dryer while still slightly damp. Items that require complete drying can be left longer.
- Temperature of the room: the lower the temperature of the room, the longer it will take for the dryer to dry clothing.
- Bulk: certain bulky items require special care during the drying process. We suggest removing these items and replacing them in the dryer once they have been shaken out: repeat this procedure several times during the course of the drying cycle.

! Do not over-dry items.

All fabrics contain natural dampness which helps to keep them soft and fluffy.

Warnings and suggestions

EN

! This appliance was designed and manufactured in compliance with current international safety standards. The following information is provided for safety reasons and must be read carefully.

General safety

- This tumble dryer must not be used by persons (including children) with physical, sensory or mental impairments or with little experience and knowledge of the appliance, unless they are supervised or have been adequately instructed on its use by the person responsible for their safety.
- This tumble dryer is designed for domestic and non-professional use.
- Do not touch the appliance while barefoot or with wet hands or feet.
- Unplug the appliance by pulling on the plug, not the cord.
- Do not allow children near the appliance while it is in function. After use, switch the appliance off and unplug it. Keep the appliance door closed to prevent children using it as a toy.
- Children must be supervised to ensure that they do not play with the appliance.
- The appliance must be correctly installed and receive adequate ventilation. The air intake on the front part of the dryer and the air vents on the rear must never be obstructed (see *Installation*).
- Never use the dryer on carpeting with high pile as this may prevent air from entering the dryer from the base.
- Check whether the dryer is empty before loading it.
-  The rear part of the dryer may become very hot: do not touch it while the appliance is in function.
- Do not use the dryer unless the filter, water container and condenser are properly positioned (see *Maintenance*).
- Do not use liquid fabric softener in the dryer; add it to the final rinse of the wash cycle.
- Do not overload the dryer (see *Laundry for the maximum load sizes*).
- Do not add items that are dripping wet.
- Tumble dry items only if they have been washed with water and detergent, and have been rinsed and put through a spin cycle. Drying items that have NOT been washed with water may cause the risk of fire.
- Always read the instructions on the care label carefully (see *Laundry*).
- Do not tumble dry items that have been treated with chemical products.
- Never tumble dry items that are contaminated with inflammable substances (cooking oil, acetone, alcohol, petrol, kerosene, stain removers, turpentine, waxes, wax removers and hairspray), unless they have been washed in hot water with an extra amount of detergent.
- Do not tumble dry rubber, rubber-backed articles and garments, cushions with foam rubber padding, latex foam, rubber, plastic, shower caps, water-resistant fabrics, nappy pants or liners, polyethylene and paper.
- Remove all objects from pockets, particularly lighters (risk of explosion).
- Do not tumble dry large, excessively bulky items.
- Do not tumble dry acrylic fibres at high temperatures.

- Complete each programme with the relative cold drying phase.
- Do not switch the tumble dryer off if items that are still warm are inside it.
- Clean the filter after each use (see *Care and maintenance*).
- Empty the water container and put it back in place after each use (see *Care and maintenance*).
- Clean the condenser unit regularly (see *Care and maintenance*).
- Do not allow lint to build up around the tumble dryer.
- Avoid climbing on the top of the dryer as this may damage the appliance.
- Always comply with electrical regulations and requirements (see *Installation*).
- Always purchase original accessories and spare parts (see *Assistance*).

! **WARNING:** Never stop the dryer before the end of the drying cycle unless all items have been quickly removed and hung in order to dispel heat.

Information on recycling and disposal

As part of our continual commitment towards environmental protection, we reserve the right to use recycled quality components to reduce costs for our customers and to minimise materials wastage.

- Disposing of the packaging materials: follow local regulations to allow for recycling of packaging materials.
- In order to minimise the risk of injury to children, remove the door and plug, then cut the power supply cord flush with the appliance. Dispose of these parts separately to prevent the appliance from being connected to a power supply socket.

Disposal of old household appliances

European Directive 2002/96/EC concerning Waste Electrical and Electronic Equipment (WEEE) states that household appliances should not be disposed of using the normal solid urban waste cycle. Exhausted appliances should be collected separately in order to optimise the cost of re-using and recycling materials comprising the machine, while preventing potential damage to public health and the environment. The crossed-out wheeled bin symbol appears on all products to remind owners of the obligations regarding separate waste collection. Owners should contact their local authorities or appliance dealers for further information concerning the correct disposal of household appliances.

Saving energy and respecting the environment

- Wring out items before tumble drying them to remove the maximum amount of water possible (if they are previously washed in a washing machine, select a spin cycle). This ensures that energy is saved during tumble drying.
- Always use the tumble dryer at full load to save energy: single items and small loads may take longer to dry.
- Clean the filter at the end of each cycle to reduce energy consumption costs (see *Care and maintenance*).

Disconnecting the power supply

! Disconnect the dryer when not in use or during cleaning and maintenance operations.

Cleaning the filter after each cycle

The filter is a fundamental component of the dryer: its function is to collect lint and fluff that form during drying. Clean the filter once drying is completed, by rinsing it under running water or cleaning it with a vacuum cleaner. Should the filter become clogged, the flow of air inside the dryer will be seriously hampered: drying times becomes longer and more energy is consumed. Moreover, the dryer may become damaged.

The filter is located in front of the dryer seal (see *Picture*).

Removing the filter:
1. Pull the filter's plastic handle upwards (see *Picture*).
2. Clean the fluff off the filter and replace it correctly. Ensure that the filter is placed flush with the dryer seal.

! Do not use the dryer unless the filter has been replaced in its holder.

Checking the drum after each cycle

Rotate the drum manually to remove smaller items (handkerchiefs) that could have been left inside the dryer.

Cleaning the drum

! Avoid using abrasives, steel wool or stainless steel cleaning agents to clean the drum.

A coloured film may appear on the stainless steel drum surface: it may be caused by a combination of water and/or cleaning agents such as wash-softeners. This coloured film does not affect the dryer's performance.

Cleaning the tumble dryer

- The external metal and plastic parts and the rubber parts can be cleaned with the aid of a damp cloth.
- Clean the front air intake grille regularly (every 6 months) with a vacuum cleaner to remove any lint, fluff or dust deposits. Furthermore, remove any lint deposits from the front part of the condenser and from the filter area, using a vacuum cleaner every so often.

! Do not use solvents or abrasives.

! The dryer uses ball bearing components that do not require lubrication.

! Have the dryer checked regularly by authorised technical personnel in order to ensure that the electrical and mechanical parts work safely (see *Assistance*).

Troubleshooting

EN

If you feel that the dryer is not working properly, consult the following troubleshooting suggestions before contacting the Technical Assistance Centre (see *Assistance*).

Problem:

The dryer does not start.

Possible causes / Solutions:

- The plug has not been inserted far enough into the socket to make contact.
- There has been a power cut.
- The fuse has burned out. Try connecting another appliance to the same socket.
- If an extension cord is used, try connecting the dryer plug directly into the socket.
- The door has not been closed properly.
- The programme has not been set correctly (see *How to carry out a drying cycle*).
- The START button has not been pressed (see *How to carry out a drying cycle*).

Drying times are too long.

- The filter has not been cleaned (see *Care and maintenance*).
- An incorrect drying time was selected for the type of load (see *Laundry*).
- The items are too wet (see *Laundry*).
- The dryer is overloaded (see *Laundry*).
- The flexible ventilation hose may be blocked (see *Installation*).
- The air inlet may be blocked or obstructed (see *Installation*).
- The fixed ventilation flap, on the protective weatherproof cover, may be obstructed (see *Installation*).

The dryer is noisy during the first few minutes of operation.

- This is normal, especially if the dryer has not been used for a long time. If the noise persists during the entire cycle, contact the Technical Assistance Centre.
